January 11, 1972.....TO ALL CONTACTS

First, I have recently "gotten up off the floor financially"...thus will be able to do a bit more with these announcements...thanks to Binder, Sage, and the disc-people.

Second...if you will get the paperback book, "Morning of the Magicians" and take careful note from p. 375 on...you will see a lot of material...that applies to PK Men there. It is utterly amazing...the relevance.

Third...and the main reason for this missive...a MOST IMPORTANT "HIT"...or proof of demonstration from the Si's...called in advance by me.

See...get from your file...my Contact letter of Nov. 1, 1971. Last one, I believe. In it...read: "About two weeks ago the Si's urged me to rush out a contact letter to the scientists in particular...that they would cause something spectacular to happen, not on earth...but in outer space that could be observed from earth...to show what powers they have. (Take careful note of those underlined parts, Ted)."
Then I pointed out that there was, observed from earth, a mysterious, unprecedented, storm on Mars...dust storm...nothing ever seen like it. (And I was furious, because I hadn't had the money to notify everybody...I could have notified just the scientists, but I wanted to notify all 80 at once, and couldn't.)
Well...GET THIS...THE SI'S HAVE SIMPLY GIVEN ANOTHER DEMONSTRATION! To demonstrate their awesome powers...and remember...I told you this was their intention on Nov. 1, 1971. In this morning's paper: (Virginian-Pilot, Norfolk):

"COULD HAVE ROCKED EARTH
MASSIVE SUN FLARES PHOTOGRAPHED
Washington(AP) - A solar explosion so violent it might have rocked the earth back on its heels a bit - had it been aimed in this direction - has been recorded by an optical device for the first time. Solar physicists of the Naval Research Laboratory (NRL) were elated not only at the dramatically informative pictures themselves but at the demonstration of a completely new method for observing solar flares..Major explosive outbursts of the sun's atmosphere cause such effects on earth as blackouts of long-distance radio communication and even of telephone service, spectacular displays of the northern lights, and geomagnetic storms in the earth's natural magnetic field. And when they are of the fantastic energy associated with the solar eruptions of Dec. 13 they could, if they hit the earth directly in full concentration, slow the earth's rotation,(note: please see in my past letters my own reference to the Si's "earth-brake". Ted) said Dr. Richard Tousey, chief of the NRL rocket spectroscopy branch. "Sudden very small changes in the rotation period of the earth, in the past, could have been caused by the impact of material from the sun or outer space," Tousey told a news conference. The eruption seen in action Dec. 13 (1971) and recorded optically for the first time in the history of science, was classified as a major solar flare.....the "Class 2" flare photographed Dec. 13 by an instrument called a white light cronograph, aboard the OSO7 Orbiting Solar Observatory, showed clouds of electrons and protons at million-degree temperatures, measuring 20 to 40 times the diameter of the earth, rushing away from the back side of the sun at 600 miles a second."

All right...Contacts. The Si's have just given a second demonstration of their powers... after having me write you that "mad" letter of Nov. 1 (mad because they'd given a demonstration on Mars for our benefit...and I didn't get you notified in advance.) Well, you were notified in advance of this second demonstration of theirs.

And you know what? Having this kind of power...the Si's could just as easily, I am certain...strike the earth with the above...instead of throwing the power from the back side of the sun...if they want to, any old time. By using their own "earth brake" thus...they could alter the entire surface of the earth! And its inhabitants!

Ted Owens (PK Man)
