

August 27, 1973.....SCIENTISTS

Since ordering me to cease practicing OD mechanisms (other0dimensional=OD) The Si's have led me into new areas of assignment. They have shown me how...to code 20-40 discs with OD mechanisms...then spread the discs over a huge farm in Canada...forming in effect one huge coded disc...making a "target" for Nature itself to link up with...in order to produce favorable weather and growing conditions for crop production. Of course, all the power involved is positive, constructive. So far, in my experimentation with this, it has been successful over quite a long period...utilizing a thousand or so acre farm in Saskatchewan, Canada. I hope to expand this work...to cover other farms and ranches...in order to be able to document it even more widely and thoroughly. For instance, below is a newsclipping this week from the local Virginia paper. It is too bad...that some of these farmers could not contact me and set up a coded-disc area around their farm...to bring not only favorable weather for their crops, but also control of the insect infestation. Because the powers being used...are not within the framework of this world's physical laws...anything is possible, though it might not seem so to our scientists. I believe I have amply demonstrated that...by already producing several hundred miracles.

My new project...told to me by the Si's just last week (and I had been standing by, for months, waiting for their instructions)...is to get around the world, putting things right that go wrong...by using OD mechanisms and powers (stopping destructive volcanos; blocking hurricanes from hitting land mass; and so on and on in a thousand different mediums). What they were waiting for...was someone to provide a financial base for me to work out of; i.e., to fund my ever-continuing work in psi-force and OD mechanisms (with a Foundation, perhaps)...and to bankroll my flying, at a moment's notice, to any corner of the globe to "put out a fire", using my extraordinary powers. And last week a man came to me...from nowhere...to talk about just such a financial base! All of the above, of course...is positive and constructive...and they have "jumped me up" to a higher plateau...requiring much more issuance of OD power on my part...so evidently my mental power has grown much more, this past year, or they would not consider me ready for this assignment.

Going back to the first paragraph...I have the knowledge, ability and mechanisms at my fingertips...to service an (infinite) number of farms and ranches...anyplace on earth...with favorable weather and improved crop production. The four giant UFO's that I work with at each side of Earth...will beam out the proper OD power to help those farms and ranches, no matter where they are on earth...each day...as I activate them.

Insects May Hurt Soybeans

VIRGINIA BEACH—The most serious invasion of insects in more than a decade threatens to damage the local soybean crop valued at \$4 million, an agricultural expert said Thursday.

Virginia Beach soybean farmers, who farm about 23,000 acres, are the largest producers of the crop in the state.

E. R. Cockrell, the local extension agent for Virginia Tech,

said. "This is the first time in over 10 years that so many different insects threaten to infest the local crop."

Although it is still early in the insect season, he said, the alarming aspect is that "five new species of insects have joined the usual two varieties to attack the crop."

This year's harvest, which begins in October, is particularly vital because "a bumper crop ultimately would reduce the cost of food," according to Cockrell.

Local farmers are expected to produce about 750,000 bushels of soybeans and "though it is difficult to project the price per bushel at this year's harvest, it should be about \$5 and thus yield almost

a \$4 million crop," he said. That would be twice the worth of the average harvest.

"To head off any possible infestation, three crop-dusting planes are spreading insecticide over the fields just as in the full swing of the insect season," he said.

Most of the crop is in Princess Anne, Blackwater, and Pungo boroughs.
